

PROGroup Engineering®

Serial Production of machined and welded parts

Based on specific customer's requirements, we prepare a prototype production according to the required design. After that, we set all manufacturing processes and technologies. We process the documentation for the start of serial production. In the process of serial production, we use CNC machine tools, automated welding processes, 3D forms and innovative approach to optimize production.

Serial production of machine components

- Steel axial joints
- Clamping and anchoring components
- Special structural parts
- Petroleum substances separators
- Type fittings
- Cases
- Filters
- Setters
- Suspension systems

The Power of Experience in Welding
