

Drinking and industrial water treatment

We manufacture pipe and pressure filters for the treatment of drinking and industrial water. Filters are used to capture mechanical impurities and also for sludge removal. We supply flanged pipe filters in versions DN 150 to DN 300 for PN 10 to PN 25.

Pressure filters belong to the group of foam filters. These filters separate the impurities contained in the liquid. Specifically, these are mechanical impurities, elements Fe, Mn, etc. We supply pressure filters with diameters of 450, 600, 800 mm. The filters are filled with various filter cartridges tailored to the specific requirements for liquid purity.

Water treatment units

- Pipe filters
- Pressure filters
- Magnetic filters
- Dosing tanks
- Oil separators
- Storage tanks
- Type water treatment plants
